3919. ŠVÁB J. Urol. Klin., Vojenskej Lek. Akad. J. E. Purkyňu, Hradec Králové. Naše zkušenosti s chirurgickou léčbou rakoviny močového mechúra *Surgical treatment of cancer of the urinary bladder* Bratislavské lekár. Listy 1957, 37/7 (392-401) Tables 3 Illus. 1

In the years 1936-1956 in the urological department of the University hospital in Hradec Králové 156 patients were operated upon for cancer of the urinary bladder. In 80 the 3rd degree, and 51 the 4th degree of malignancy (according to Broders) was present. Out of 42 after total cystectomy, 5 died following operation, 16 lived or are living for more than one year, and 2 of them for more than 5 yr. In 29 the tumour was removed by partial resection of the bladder. Two of these are alive without relapse for more than 3 yr. In 62 patients the cancer was removed by electroresection and electrocoagulation by the open route (per epicystotomiam). Five from this group after removal of the papilocarcinoma are alive for 10-17 yr. without relapse. In 23 instances a palliative intervention was performed, in 14 of them ureteroanastomosis without cystectomy. Late results following cystectomy in infiltrating cancers are not good because of too late decision for operation. Direct ureterosigmoidostomy according to Cordonnier proved to be good. In all cases operated upon, there was found after ureteroanastomosis a greater or lesser disturbance of homeostasis and of acid-base balance in the sense of hyperchloraemic acidosis.

Psychiat. Klin., Karlova Univ., Karlova. K principu jednoty organismu a prostředí v psychotherapii. On the principle of the unity of the organism and its milieu in psychotherapy NEUROL.PSYCHIAT. ČSL. 1953, 16/5 (257 - 267) Illus. 1
The relations of a child to its parents express the mutual influence of the milieu upon the individual and vice versa on the basis of mutually strengthened conditioned reflexes. The histories of some neurotic children are given. Complete disappearance of the neurotic condition has been reached by influencing the parents and improving the mutual relations. Enuresis nocturna is sometimes the neurotic reaction to a certain milieu. The unity of the organism with the milieu makes itself felt not only when the neurosis arises, but also in its course and disappearance. In adults it is essential to influence the patient himself psycho-therapeutically so far that he gets rid of disturbing stereotypes and adapts himself to his milieu. Novotný - Brno

4143 **Damage to Ribs Exposed to X-rays in a Case of Mammary Epithelioma. V. Grub. Českosl. Lékař. Časopis 68, 531-5(1949)(in Czech).**

The author observed pathological changes in the ribs in eight patients irradiated for breast cancer; the changes were supposedly due to irradiation. He reports on five patients of his own and three patients irradiated in other institutes; in all cases tangential fields of deep x-rays were applied. The x-ray pictures of the damage to the ribs were the same in all cases: in the early stage the bony structure was interrupted in a limited part of the rib; in the later stage a sclerotic strip of bony tissue was formed at the border of the interrupted bone, 4 to 5 mm in extent. Healing took two to three years and even longer, and was accomplished only by central callus formation. These changes in the ribs were always found in the anterior axillary line or somewhat frontally; in this region the nutrition of the bone is poor, because it is the final area of blood supply of the posterior intercostal and the internal mammary arteries. In almost all patients there were cutaneous telangiectases; sclerosis of lung tissue was never found; there was no relation between the dose and the findings in the ribs. The author is of the opinion that the delayed healing and the absence of periosteal callus formation is the result of a temporary diminution of osteoblastic function of the rib tissue following irradiation.
